The program's menus are different depending on whether it is used to edit color images or create black-and-white images. For example, if you want to use the Levels command to enhance a color image, choose the Color Image menu to make adjustments to the image. ## Editing an RGB image An RGB (Red, Green, and Blue) color image is a three-color representation of light. RGB color is used most often on high-end printers and computers. The deeper the color, the more detailed the image. R, G, and B layers are the three primary layers within a Photoshop document. To learn more about color, check out Chapter 11. When you look at an RGB image, the red light gives you basic information about how much the colors are intensified or dimmed. When you make adjustments, the RGB color model determines what happens to the colors of the image. For example, if you decrease the blue intensity in an RGB image, the image's blues become less intense and are now more green. Generally, RGB is better than CMYK (Cyan, Magenta, Yellow, and Black) in terms of image quality.

The Healing Brush can remove blemishes or unwanted areas from an image. The Gradient tool allows you to create vector effects, like gradients and shading, on anything in the layers panel. The Pen Tool lets you create simple lines, dots, ovals or rectangles, and fill them with colors or patterns. There are also different effects you can apply on the tip of the pen. The Text tool lets you draw lines, create symbols and text, and resize any object on the layer you are working on. The Zoom tool allows you to change the magnification of your image. A very useful tool for working with images is the Burn tool. It allows you to reduce the level of color contrast within a photo, improving the overall tonal quality. Photoshop is also equipped with a lot of filters and special effects that help to improve an image. In the Lens Correction tool, you can tilt, rotate, and distort your image. Also, the Red Eye Removal tool can help to remove traces of eye-tracking on faces. A Web Design Is Necessary For Your Brand. "I am deeply honored to have been selected by the President for this position," said Frisbee. "I am committed to overseeing the development of the work that the IRS and the rest of the Treasury Department performs for the American people, and I look forward to leading this agency. I am a proud South Carolinian, and I am eager to work with the folks of South Carolina in their communities." Frisbee served as a Senior Economist at the Congressional Budget Office, and also worked as an economist at the RAND Corporation and the Federal Reserve Bank of San Francisco. Before joining the CBO, Frisbee worked on Capitol Hill where she served as Associate Director for Tax Policy at the Joint Committee on Taxation. Frisbee is a graduate of Rice University, where she earned a bachelor's degree in economics. She received her Master's of Business Administration from the Fuqua School of Business at Duke University.Q: Cache Jackson in Memory (Hazelcast) I have a container which is an implementation of Caffeine. I need to store an object and it's description so I am having to put it in cache and retrieve it later. I am looking to use a Hazelcast cache but the cache needs to be in the same memory as the spring application so I can't just store it in a hazelcast. I looked at the documentation and I see there is an option to cache it in memory for 30 seconds. @Cacheable("myCache") public class DefaultCaffeineCache implements CaffeineCache { private static final Logger log = Logger.getLogger(DefaultCaffeineCache.class.getName()); @Override public Long get(Object key, long expiration) { log.debug("In get: " + key.toString()); if (key == null) { log.debug("key is null: " + key.toString()); return null; } Object object = cache.get(key); if (object != null) {
